specific brain regions during the rat oestrous cycle and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   receptor.";
Regul. Papt. 83:1-10(1999).
-!- PUNCTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin through its receptor GPR10. May stimulate accoracin of prolactin through its receptor GPR10. May stimulate accoracin propriety to secrete PRL.

"A prolactin-releasing peptide in the brain.",

Nature 393:272-276(1998).

-!-FUNGTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin through its receptor GPR10. May stimulate lactorrophs directly: Medulla oblongata and hypothalamus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

- FUNCTION: Interacts with SLP-76 to regulate NF-AT activation.

E Binds to tyrosine-phosphorylated shc.

- SIMILARITY: Contains 2 SH3 domain.

C - SIMILARITY: Contains 2 SH3 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ellis J.H., Ashman C., Burden M., Kilpatrick K.E., Morse M.A., Hamblin P.A., "GRID, a novel Grb2-related adapter protein which interacts with the activated T cell co-stimulatory receptor CD28."; Submitted (FEB-2000) to the EMBL/GenBank/DDBJ databases.

Rose J.K.C., Braam J., Fry S.C., Nishitani K.;
Rose J.K.C., Realyzes xyloglucan endohydrolysis (XEH) and contransglycosylation (XET). Cleaves and religates xyloglucan endohydrolysis (XEH) and chereby participates in cell wall construction of growing tissues.

May be required during development to modify the walls of cells under mechanical stress.

C. CAPALYTIC ACTIVITY: Breaks a beta-(1->4) bond in the backbone of a xyloglucan and transfers the xyloglucanyl segment on to O-4 of the conn-reducing terminal glucose residue of xyloglucan or an oligoseccharide of xyloglucan.

C. CAPALYTIC ACTIVITY: Brooks a beta-(1->4) bond in the backbone of a xyloglucan or an oligoseccharide of xyloglucan.

C. SUBCELILLAR LOCATION: Apoplast (Probable).

C. SUBCITION: May be transcriptionally regulated by ANGUSTIFOLIA.

C. PPM: Contains at least one intrachani disulfide bond essential for its enzymatic activity.

C. PPM: N-glycosylated, essential for its enzymatic activity.

C. PPM: N-glycosylated, essential for its enzymatic activity.

C. SUBCELILLON: Ref. Sequence differs from that shown due to frameshifts in positions 158; 178; 183; 189; 190; 194 and 199.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. Sequence of the region downstream of the Vitreoscilla hemoglobin gene: vgb is not part of a multigene operon.";
Appl. Microbiol. Biotechnol. 42:304-308(1994).
-!- FUNCTION: The UVTABC repair system catalyzes the recognition and processing of DNA lesions. UVTA is an ATPase and a DNA-binding protein. A damage recognition complex composed of 2 uvTA and 2 uvTB subunits scans DNA for abnormalities. When the presence of a lesion has been verified by uvTB, the uvTA molecules dissociate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Promis PRO0005; ABC transporter; 1.

Submitted (OCT-1997) to the EMBL/GenBank/DDBJ databases.

-!- PUNCTION: The UvrABC repair system catalyzes the recognition an processing of DNA lesions. UvrA is an ATPase and a DNA-binding processing of DNA lesions. UvrA is an ATPase and a DNA-binding protein. A damage recognition complex composed of 2 uvrA and 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            15-DEC-1998 (Rel. 37, Created)

-!- FUNCTION: The UvrAbC repair system catalyzes the recognition and processing of DNA lesions. UvrA is an ATPase and a DNA-binding protein. A damage recognition complex composed of 2 uvrA and 2 uvrB subunits scans DNA for abnormalities. When the presence of a lesion has been verified by uvrB, the uvrA molecules dissociate (By similarity).

-!- SUBUNIT: Forma a heterotetramer with uvrB during the search for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 lesions (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
SIMILARITY: Belongs to the ABC transporter family. UvrA subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HAWAP; MF 00205; -; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (By similarity).
SUBUNIT: Forms a heterotetramer with uvrB during the search for lesions (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
SIMILARITY: Belongs to the ABC transporter family. UvrA subfamily.

Processing of DNA lesions. UvrA is an ATPase and a DNA-binding protesin. A damage recognition complex composed of 2 uvrA and 2 uvrB subunits scans DNA for abnormalities. When the presence of lesion has been verified by uvrB, the uvrA molecules dissociate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10-OCT-2003 (Rel. 07, Last sequence update)

## ALIGNMENTS

```
agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperlipidaemia, hyperlipidaemia, hypercholesterolaemia, hypergyoclactinaemia, diabetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein. (Updated on 27-AuG-2003 to correct OS field.)

The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated (PRR10 (human) or URR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pituitary, central nervous system, pancreas and other tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to raise antibodies. They may also be used therapeutically, polypeptide ligand for orphan G protein coupled receptors - used for ating disorders of central nervous system, pituitary and pancreas, and Disclosure, Page 26; 206pp; English. for drug screening treating

The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing

Claim 3; Page 154; 241pp; English.

e.g. to treat semile dementia; Alzheimer's, Parkinson's or Huntington's diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; disabetes; schizophrenia; disorders of growth hormone secretion, cancer; rheumatoid arthritis, epilepsy and many others, also to improve postoperative mutritional status and as vasopressor. Transgenic animals carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of disease, for drug screening and as source of cell lines. The ligand polypeptide DNA is used as a source of probes and primers; to identify related sequences; in receptor-binding assays; for production of Ab and antisera; in drug development; for gene therapy and to develop transgenic animals. Sequences AAW95174 represent antigenic epiotpes which can be used for the preparation of anti-ligand polypeptide antibody

hypocvarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, imporence, amenorthea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Porbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing chriscarcinoma, hydatid mole, irruption mole, abortion, unthrifty feuts, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with ahormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 1992 ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New monoclonal antibodies, useful in diagnosis, as drugs and in studying diseases related to ligand abnormality.
                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Monoclonal antibody, 19P2 ligand; diagnosis; prolactin secretion; pituitary; regulatory mechanism; central nervous system; pancreatic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                                                                                                                                                                                                Rat; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cc caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. was an atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a rat peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently covalently active amino acid region (IV), which covalently bonds with amino/hydroxyl/thioi groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic control peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.

Compatible and specificity as bonding to large molecules decreases for reduces the action of peptidases to increase length of activity (half littacellular uptake and interference with physiological processes.

                                                                                                                                                                                                                                                                                                                Use of G protein receptor ligand or peptide for controlling corticotropin releasing hormone secretion.
                                                                                                                                                                                                                                                                                                                                                                                     The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor Thisand. This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nauses, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the
Rat; corticotrophin releasing hormone; CRH; G protein receptor ligand; analgesic; hyperaldosteronism; hypercortisolaemia; hypoadrenocorticism; Addison's disease; adrenal gland hyperfunction; obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rat; wakefulness; sleep disorder; prolactin releasing peptide receptor; PrRP; GPRL0; therapy; epilepsy; narcolepsy; sleepiness; sleep apnoea; insomnia; idiopathic hypersomnia; psychogenic hypersomnia; selzure; anticonvulsant.

                                                                                                                                                The present invention relates to a method of screening for compounds for peromoting wakefulness or sleep in a mammal. The method involves administering a prolactin releasing peptide (PrRP) receptor (GPRIO) agonist or antagonist respectively and determining the ability of the compound to promote wakefulness or sleep. The compounds identified from the method are used in the therapy of epilepsy and other diseases associated with absence seizures and in promoting wakefulness and sleep in individuals having sleep disorders such as insomnia and narcolepsy. PrRP receptor agonists may be used to treat common disorders which lead psychogenic hypersomnia. PrRP receptor antagonists are useful for picconding sleep and for treating insomnia such as adjustment sleep disorder and psychophysiologic insomnia. The present sequence is rat PrRP-31 C-terminal peptide, PrRP-20
                                                                    Screening for compounds useful for promoting wakefulness or sleep, and for treating sleeping disorders, e.g. insomnia, hypersomnia or sleep apnea, comprises administering a prolactin releasing peptide agonist or antagonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.
                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide production by gene recombination associated peptide #24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide production, low-molecular peptide, KiSS-1, GPR8 ligand, gene recombination.

This sequence represents a peptide fragment from a novel rat type ligand polypeptide corresponding to amino acid residues 33 to 53 of the sequence represented in AAW31383 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pannoratic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of
                                                    The invention describes a method of producing a peptide comprising the excision of the N and C-terminals of a target peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a precursor protein. The method is for producing (low-molecular) peptide e.g. KiSS-1 peptide and GRR8 ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      G protein-coupled receptor; ligand binding; pharmaceutical; modulator;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boradom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypotunction and obesity. The present sequence is a peptide used in the exemplification of the
                                                                                                                                 Rat, corticotrophin releasing hormone, CRH, G protein receptor ligand, analgesic, hyperaldosteronism, hypercortisolaemia, hypoadrenocorticism, Addison's disease, adrenal gland hyperfunction, obesity.

COW;

This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a rat peptide which acts as an oxytocin secretion

Sequence 21 AA;

promoter

Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.

This sequence represents a peptide fragment from a novel rat type ligand corresponding to amino acid residues 33 to 54 of the sequence polypeptide corresponding to amino acid residues 33 to 54 of the sequence represented in AAA31383 and is used in an assay to monitor lagand binding to the the protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This containing this ligand modulator or a pancreatic function modulator. This control nervous system modulator or a pancreatic function modulator. This consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone consciousness, anxiety syndrome, schizophrenia, typercholacturaemia, diabetes, hypercholacterolacmia, hypercylveriddemia, hypercholacturaemia, diabetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, concer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, concern, any lotrophic lateral solerosis, acute myocardial infarction, infertility, splnocerbellar degeneration, bone fracture, trauma, atopic dermatitis, compounds which are capable of altering the binding activity of the lighdated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rat; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cow; caesarean section; artificial fertilization; galactostasis; goat; pig; veterinary medicine; milk production.
                                                                                                                                                                                                                                                                                                                 peptide for G protein-coupled receptor - acts by modulating on in the central nervous system, pancreas and pituitary gland.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes a method of producing a peptide comprising the excision of the N and C-terminals of a target peptide with enzymes or chemically through the attached cleavage sites repeated by ligation in a precursor protein. The method is for producing (low-molecular) peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by the gene recombination technique through tandem repeats to provide a precursor protein with specific cleavage sites. With this method, peptide production can be carried out easily to provide large quantities of the required peptides. This is the amino acid sequence of a peptide associated with the peptide production method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Process for producing peptides e.g. KiSS-1 peptide and GPR8 ligand for subsequent applications by gene recombination technique through tandem repeats to provide precursor protein with specific cleavage sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      modulator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ..
                                            Peptide production by gene recombination associated peptide #25
                                                                                   Peptide production, low-molecular peptide, KiSS-1; GPR8 ligand, gene recombination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      G protein-coupled receptor; ligand binding; pharmaceutical;

This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of furges for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, therine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a rat peptide which acts as an oxytocin secretion
                                                                                                                                                                      Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary medicine.
                                                                                                                                                                                                                                                             Disclosure; Page 59; 72pp; Japanese.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
